

IMAGEN - Biotech

**Sample Images
to Illustrate Innovative Software Potential**

Sabine K McNeill

The Input

The Re-Visualization: Co-Loc1

Individual re-visualizations show:

- new perspectives
- more detail.

Co-Loc1 with Changed Viewing Parameters

Viewing
parameters for
new
perspectives
reveal:

- new
relationships
- significant
correlations.

Co-Loc1 with Changed Viewing Parameters

The variation of viewing parameters allows for the investigation of:

- image components and their descriptors
- verbal and numerical descriptions.

Re-Visualization: Co-Loc2

Co-Loc2 with Changed Viewing Parameters

Co-Loc2 with Changed Viewing Parameters

Re-visualization: Zebra

“3dM datascapes”
offer a new ‘metric
view’ of an image,
with new scope
for visual effects
and highlights.

More image input

Autophagy 1

Differences between images can be visualized and quantified.

Autophagy 2

Dual Apoptosis 1

Dual Apoptosis 2

Internalisation 1

Internalisation 2

Internalisation 3

Differences between images can be visualized and quantified.

In Summary

Human Vision

- Visual 3D effects
 - Colour
 - Contrasts
- Machine Vision
 - Imaging technologies

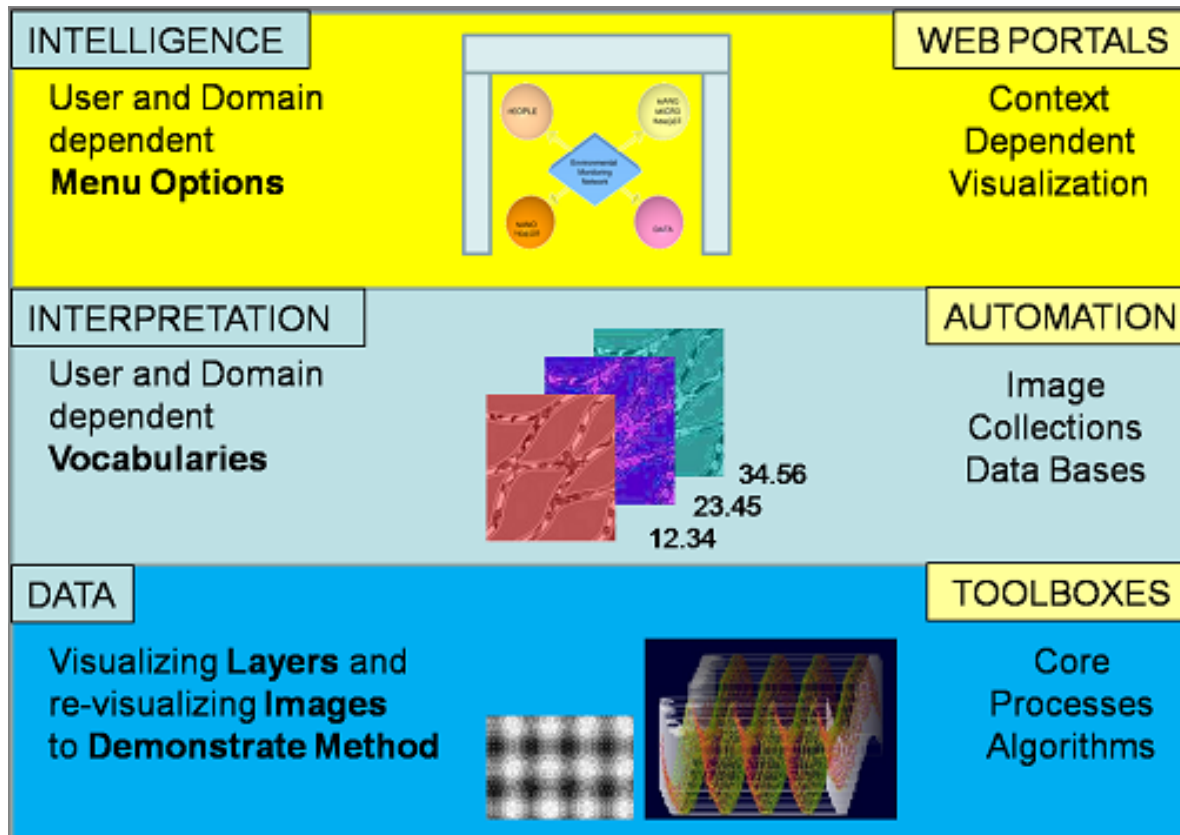

“3dM Software Vision”

- New 3D perspectives
- More visual details
- More metric accuracy
 - New image qualities
 - New qualitative quantifications

“3dM Image Processing”

- “Numerical meta data” for images as a whole
 - sorting, ranking, selecting according to criteria
- “Image metrics” for image components
 - comparing according to measures.

Proposal

Developing an ‘expert portal’ for analysing and processing clients’ images

Human Analysis requires vocabulary for

- **describing** image contents.

Software Processing requires vocabulary for

- **quantifying** image contents.
